1 THEOREMS ,LEMMAS,COROLLARIES,DE

Theorem 1.1 (Pythagoras theorem).

$$x^2 + y^2 = z^2 \tag{1}$$

Lemma 1.1.1.

$$b = ra \tag{2}$$

Corollary 1.1.1. *there is no triangle with side 3,4,6*

Defination 1.1 (Absolute value).

$$|x| = \begin{cases} x & x \geq 0 \\ -x & x < 0 \end{cases} \tag{3}$$

2 THEOREMS ,LEMMAS,COROLLARIES,DE

Theorem 2.1 (Pythagoras theorem).

$$x^2 + y^2 = z^2 \tag{4}$$

Lemma 2.1.1.

$$b = ra \tag{5}$$

Corollary 2.1.1. *there is no triangle with side 3,4,6*

Defination 2.1 (Absolute value).

$$|x| = \begin{cases} x & x \geq 0 \\ -x & x < 0 \end{cases} \tag{6}$$

3 THEOREMS ,LEMMAS,COROLLARIES,DE

Theorem 3.1 (Pythagoras theorem).

$$x^2 + y^2 = z^2 \tag{7}$$

Lemma 3.1.1.

$$b = ra \tag{8}$$

Corollary 3.1.1. *there is no triangle with side 3,4,6*

Defination 3.1 (Absolute value).

$$|x| = \begin{cases} x & x \geq 0 \\ -x & x < 0 \end{cases} \tag{9}$$

4 THEOREMS ,LEMMAS,COROLLARIES,DE

Theorem 4.1 (Pythagoras theorem)**.**

$$x^2 + y^2 = z^2 \tag{10}$$

Lemma 4.1.1.

$$b = ra \tag{11}$$

Corollary 4.1.1. *there is no triangle with side 3,4,6*

Defination 4.1 (Absolute value)**.**

$$|x| = \begin{cases} x & x \geq 0 \\ -x & x < 0 \end{cases} \tag{12}$$
